

```
fmt::formatter< std  
::string >
```

A diagram illustrating the relationship between two C++ formatter specializations. A light gray box at the top contains the code `fmt::formatter< std::string >`. A dark gray box at the bottom contains the code `fmt::formatter< unsigned __int128 >`. A blue arrow points from the bottom box to the top box, indicating that the specialization for `unsigned __int128` is inherited by the specialization for `std::string`.

```
fmt::formatter< unsigned  
__int128 >
```
